Virtual Fax
Faxing for the 21st century

Send, Receive, View and Download Faxes in the UC Client or Portal

Faxing is still a part of some organizations' workflows, but the bulky old fax machine doesn't have to be. With virtual fax capabilities that are integrated into the PBX portal, your customers can free up space in their office and reduce their need for paper. Best of all, faxing can be as easy and convenient—and mobile—as email.

The SkySwitch Virtual Fax solution allows you to replace customers' analog fax machines with confidence. We also support legacy fax machines by recommending an ATA that uses the store-and-forward technology for high-reliability faxing services. We offer multiple options for sending and receiving that makes it easy to use and easy to sell.

KEY FEATURES

> Supports fax-to-email and email-to-fax

> Fax server will automatically attempt delivery up to 6 times and will notify the user if the job fails

> Set delivery notification to be sent via email

> Multiple users can use the same caller ID for inbound and outbound faxing

> Users can select a caller ID from multiple fax numbers for outbound faxing

> All faxes are stored in a central repository within the PBX portal

> HIPAA-compliant
